

BEARING MANUFACTURING INDIA

01 Backup Bearings with Taper Rollers

Tapered roller backup bearings are in mm & inch dimension and mounted on sheet metal levelling machines operating under heavy working conditions.

On request the outer diameter can be manufactured with cylindrical or curved shape.

On request the outer diameter can be manufactured with cylindrical or curved shape. Taking into consideration the working conditions, the sealing system is designed with rubber seals or steel rings to ensure quick maintenance of the backup and whole unit.
