Cylindrical Roller Wheels for Conveyors

BMI Engineers have developed these as a support for Coil Conveyor belts.

BMI engineers have developed and successfully executed cylindrical roller bearings used as a support for coil conveyor belts.

The cylindrical roller arrangement is particularly used for **absorbing high radial loads**.

Bmi can **develop specific design** as per the working conditions and existing installation in collaboration with end users and maintenance team.

Feel free to contact BMI engineers on design@bmibearings.com for any details
