Square Bore Double Row Taper Roller Bearing

BMI engineers recently received a challenging task of developing a square bore double row taper roller bearing.

After weeks of engineering and process development BMI has developed a **proprietary process to ensure the bearings do not crack from the bore** which was the problem the customer was facing.

BMI now regularly delivers the **disc harrow bearing** with 1-1/2-inch square bore taper roller bearing with center shaft for agricultural applications.

For drawings, load ratings & other details (pricing, availability) feel free to contact our team on design@bmibearings.com
