

Cam Follower

BMI Camfollowers are designed to run on all tracks and to be used in cam drives, conveyor systems and several other applications.

They are based on either cylindrical roller or needle roller design.

In difference to ball and roller bearings where the big size refers to the bore diameter ,for cam followers the size reference is outside diameter D.

BMI Cam followers are available in the following 3 designs:

- KR
- NUKR
- PWKR

All 3 designs have the same main dimensions but have different stud designs.

Feel free to reach out to BMI application engineers on sales@bmibearings.com for any technical questions or any such non-standard development.

Features:

- Accommodates high radial load
- Accommodates axial load
- Easy to mount
